**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamada et al., JP 2002-134169 (machine translation).

Rejection of claims 1-14 drawn to a nonaqueous electrolytic solution.

Yamada et al.(JP), teach a nonaqueous electrolytic solution comprising an electrolyte salt dissolved in organic solvent, which contains a silicon compound represented by formula 1 (claim 1), where R1, R2, R3 are represented in the abstract. It teaches R1 is a vinyl group (sect. 0010). It teaches at least one of R2 and R3 is a methyl group (sect. 0010). It teaches the organic solvent contains a cyclic ester, sulfone or sulfoxide (sect. 0043). It teaches organic solvent contains a cyclic carbonate and an acyclic carbonate (sect. 0043-0044). It teaches the cyclic carbonate comprises ethylene carbonate (sect. 0043). It teaches the cyclic carbonate comprises EC and butylene carbonate (sect. 0043). It teaches the acyclic carbonate comprises dimethyl carbonate, ethylmethyl carbonate, diethyl carbonate (sect. 0044). It teaches a carboxylic ester compound represented by formula 30 (sect. 0046). It teaches the electrolyte salt is LiPF6 (sect. 0071). It teaches the silicon compound is present in an amount of 0.05 to

5% by volume (sect. 0040). It teaches a nonaqueous secondary battery comprising the electrolyte solution (abstract).

Thus, the invention as a whole would have been obvious to one of ordinary skill in the art at the time the invention was made because although the prior art of record does not give a formula of the electrolyte comprising a halogen, it does disclose that a halogen system may be added to the electrolyte in order to give fire retardancy (sect. 0052).
